

Leading Collaborative Project Portfolio and Project Management Software

Success can be planned

The Genius Project solution goes beyond simple planning; it covers all phases of a project as well as the management of all the documents related to a project. Genius Project coordinates projects through logical and chronological segmentation.

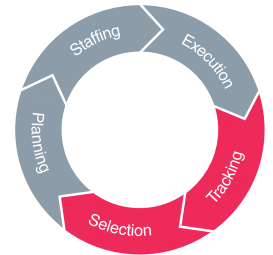

Benefits by Role

The right solution for everyone

Different people have different needs. Genius Project ensures that you offer the right functionality to the right people.

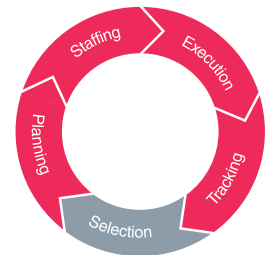

Executives

- Evaluate project requests and select according to ranking and value
- Align and measure project portfolio with business strategies
- Gain maximum visibility into project data
- Have maximum control, flexibility and visibility
- Display Gantt chart for more than one project to get a global portfolio view

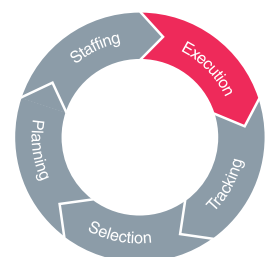

Project Manager

- Define clearly project scope, objectives and participants
- Improved planning reducing time-to-market
- Optimize resource allocation and thus reduce costs
- Reduces communication effort from project manager
- Anticipate budget and cash flow troubles
- Identify issues and prevent budget over-runs
- Avoid un-profitable projects
- Use gathered data to improve future project forecasting and budgeting
- Practice proactive project management by anticipating risks and their impacts

Project Team Member

- Improve project quality and delivery
- Everyone is clear on their deliverables and to-dos
- Quicker response times, better communication
- Improve access to project documentation and ensure quality standards
- Everyone shares the same information
- Improve risk and issue awareness

PPM Software Features

Everything you need to succeed

It doesn't take a genius to know your company's success depends on the success of your projects. It does take Genius Project to automate all your projects, people and priorities across the entire organization.

Project portfolio management

Genius Project provides the tools necessary for organizations to ensure their projects are in line with the company's strategic objectives as well as the functions required to track, manage and manipulate their projects from a high level.

Planning and Gantt Chart

The Genius Planner Gantt chart tool is designed to facilitate project planning and resource management simultaneously. Use it for individual resources or allow managers to use for their entire teams.

Resource management

The Resource management module and tools help team and project managers view their resources availability, workload and capacity filtered by a variety of different criteria helping PMs select the best resources for the job.

Time and expense tracking

The Timesheets module provide a one stop shop for gathering all actual labour and expense costs generated and incurred by resources for each individual project.

Project tracking

Using the following Genius Project tools, project managers will be able to maintain a constant eye over the progress of their projects and efficiently plan and track their completion.

Cost and budget management

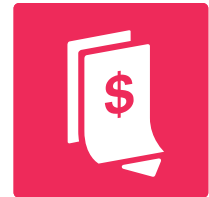

Genius Project's cost and budget management takes the math out of budgeting. By simply having resources input their expenses and time, Genius Project automatically does the rest.

With Genius Project, you get a complete project portfolio and project management solution that will connect the various departments within your organization, facilitate communication and ensure uniformity of enterprise processes and workflows. Each feature of Genius Project reflects our years of experience and knowledge in project management and our dedication to helping you succeed.

Invoicing

Genius Project's invoicing module is the natural next step in cost & budget management of projects. It includes all of the tools necessary to either automatically generate invoices for all billable labor and expenses captured in the software or to schedule billing milestones.

Demand management

Using the various demand management tools, companies can design unique request, approval and tracking workflows to capture the specific information and standardize the collection of data across projects, departments and/or even the entire organization.

Document management

The document management module provides companies with a central repository for all project related documents. Information can be sorted using various different criteria and simplify access to project information for different users with different needs.

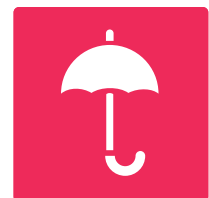

Team collaboration

Teams can easily collaborate on projects without the need for external third party tools. Automatic e-mail notifications of project scheduling, meeting invitations and even the creation and modification of new or existing documents.

Risk and change management

Using Genius Project's risk and change management modules companies can automate their internal methodologies, build mitigation plans into their project plans and track all problems and changes for future reference.

Dashboards and reporting

Genius Project offers companies the ability to design sleek dashboards including views and charts for each of the different application modules in addition to the vast list of canned dashboards, charts and views already pre-loaded with the software.

Project Portfolio Management

Get aligned, speed-up ROI

Make the right choices and increase productivity and ROI with the right strategic mix of projects. Manage the project pipeline and prioritize projects according to strategic alignment and constraints. Genius Project's portfolio capabilities allows you to group actual and potential projects so you can define scores and compare them at the portfolio level.

Base your decisions on accurate information. Define your own key performance indicators (KPI), access information through visual charts and reports and get e-mail alerts for critical decision factors.

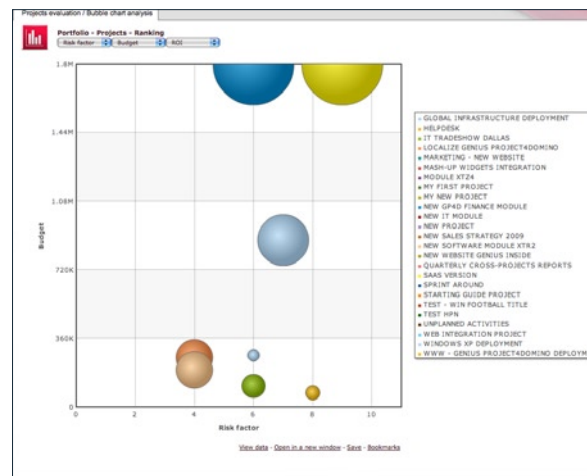

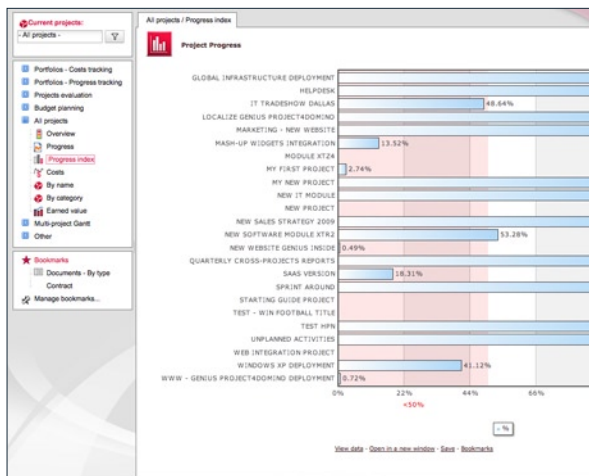

Genius Project provides high-level portfolio views of the entire project portfolio.

Projects may be grouped by business unit, division or department hierarchy. This provides management with a powerful enterprise-wide view of project statistic.

The portfolio dashboard brings together the critical elements of portfolio monitoring, issues, schedules, deliverables, risks, and metrics. Executives can quickly identify trouble areas, and drill-down for more details.

Genius Project's Key Performance Indicators.

Using the Genius Key Performance Indicators you can effectively align projects to your corporate strategy. This KPI module is designed to translate your organization's mission and business strategies into performance measures and operating objectives. It allows you to align project impact with corporate strategy to help maximize ROI.

Highlights

- Strategic Alignment
- Hierarchical Portfolio
- KPI Definition
- Portfolio Analysis
- Project Ranking
- Financial Planning
- Project Request Management

Planning and Gantt Chart

Powerful interactive Gantt chart and scheduling tool

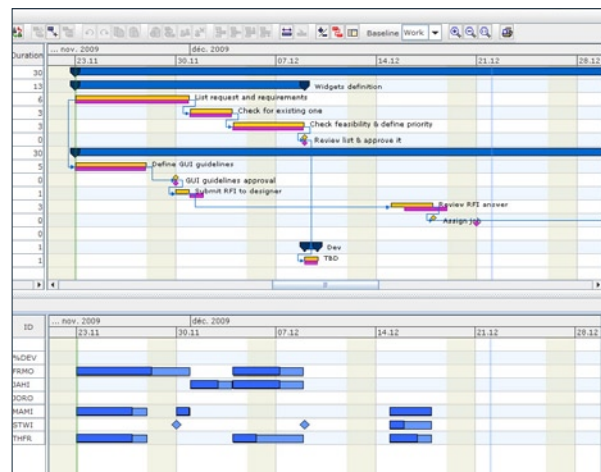

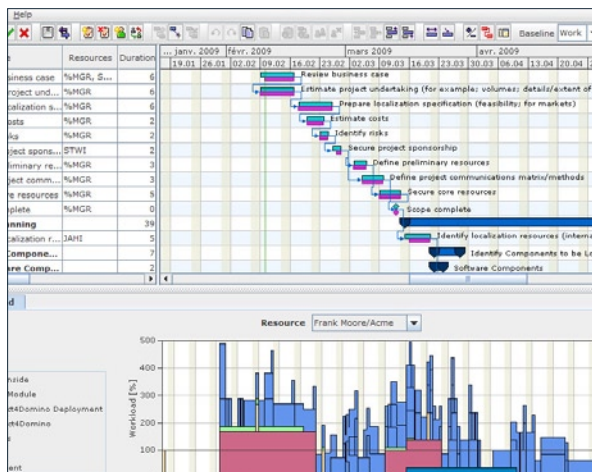

Genius Planner: The powerful and feature rich alternative to Microsoft Project is a Java based tool providing a web based comprehensive « Microsoft Project like » scheduling and planning tool in the form of the Gantt chart/diagram.

It's never been so easy to visually plan and modify projects, assign and link tasks, determine workload, base line, and cost estimates in a web based Gantt chart, that supports all functions you are used to having, as drag & drop facilities.

Genius Planner also provides advanced resource management functions, aiding you in spotting bottlenecks and under utilization of resources, in order to maximize and optimize the resource's usage in a multi-project environment.

Integration with Microsoft Project. Genius Project provides a unique integration with Microsoft Project that enables the export and import of any plan into Microsoft-Project software. In addition to this, it allows you to synchronize a Microsoft Project plan from anywhere within the project repository.

Genius Simulator. Change is probably the only constant variable project managers can depend on. Whether it is shifting priorities or the change in resource availability, preparing for the unexpected is essential for realistic project planning. Genius Project now provides a planning tool that enables managers to create "what-if" scenarios and determine how each scenario will impact your project's resources and deadlines.

Highlights

- Powerful Gantt chart
- Easy resource and team scheduling
- Multi-project Gantt chart
- Manage cross project resource usage and allocation conflict
- What-if scenario
- MS Project two way integration
- Streamline planning processes and task list distribution

Resource Management

**Gain full visibility into resource supply and demand.
Build strongest team for your project**

Maximize the ROI from your people. Genius Project's Resource module enables organizations to gain optimal results from their most valuable asset – their people. To speed time-to results, organizations must quickly find the right people and form interdepartmental teams to resolve complex problems.

Centralized management of project resources to facilitate project administration.

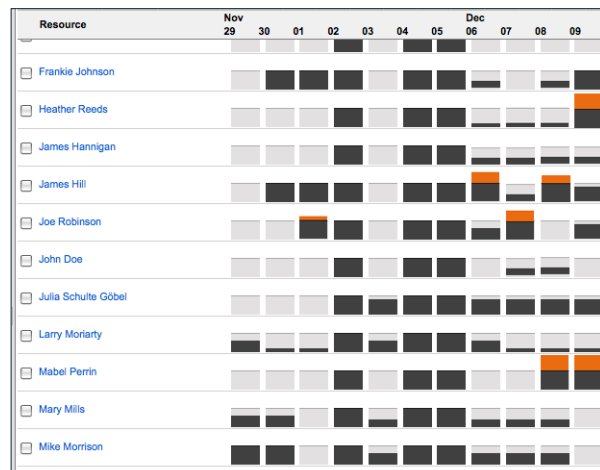

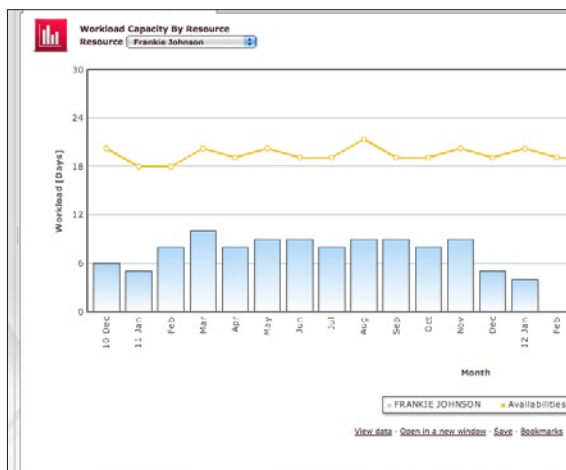

The management of project team members in a centralized manner allows you to automatically ensure the consistency of information for those people that are not only actually involved, but also those that are potentially involved, across a range of projects.

Resource availability management. Graphical and simple dashboard views are used to identify

assignments and 'free' time of resources; information is also available to show skills or a particular competency.

Dynamic resource allocation. Within your project and process models you can define resources in terms of the role they will play (for example: project manager, designer, developer, system architect).

Advanced resource search functions. Genius Project provides the tools to enhance your staffing processes. Do a quick and simple resource search based on skills and availability, then drill down to specific information about each person, including skills and individual calendars. You have instant visibility into the resource pool, making it easy to find available, qualified people across an entire global organization.

Highlights

- Maximize resource utilization
- View resource schedules and availability in real-time
- Increase accuracy of resource and team planning and forecasting
- Create more effective and profitable project teams through appropriate staffing
- Availability management and capacity planning
- Capacity planning
- Generic resource and resource profile

Timesheets and Expense Tracking

What if you could link timesheets and project costing ?

Well, now you can! Genius Project is a powerful project management software that links timesheet data directly to a project and updates the information automatically.

Easy-to-use user interface. Genius Project provides a user-friendly way of collecting actual hours and estimates of time required to complete tasks related to projects. When entering the data, an individual can also enter comments or detailed information on the nature of the time spent. When timesheets are completed, users can send an approval request to their project manager using the workflow feature or the timesheet can be approved automatically (depending on the configuration).

A complete picture of resource usage and costs. All entries in timesheets are calculated and charged to specific projects. Each resource

is assigned to an internal cost structure and a billing rate that is dependent upon the role they perform. Costs are calculated according to the planned time, time actually spent and time billed. Therefore, a complete picture of resource usage can be obtained and the financial implications (including budgets, costs and margins) can be identified. Detailed views allow management to track project hours and cost. Leveraging advanced reporting functions or advanced Microsoft Excel export (built-in), managers can create tailored views and reports.

Input expenses directly into corresponding projects. Consultants and other collaborators that travel frequently can associate their expenses directly to the corresponding projects. This is a time saving function that accelerates project invoicing and reduces the reimbursement effort for collaborators.

The screenshot displays the Genius Project software interface. At the top, there is a navigation bar with tabs for Portfolio, Project requests, Projects, Resources, Documents, Timesheets (selected), Help Desk, KPI, and Invoicing. Below this is a toolbar with buttons for Close, Save, Save & Close, Workflow, Delete, Actions, and Create. The main content area shows a timesheet for 'Frank Moore - 29/11/2010 - week 48 (editable)'. The timesheet is a grid with columns for days of the week (Mon 29, Tue 30, Wed 1, Thu 2, Fri 3, Sat 4, Sun 5) and a Total column. The rows list tasks and their corresponding hours. The tasks are: 'Global Infrastructure Deployment' (2,000 hours on Mon 29, 2,000 on Thu 2, total 4,000), 'Windows XP Deployment' (4,000 hours on Wed 1, 2,000 on Fri 3, total 6,000), 'Windows XP Deployment' (2,000 hours on Mon 29, total 2,000), 'Windows XP Deployment' (2,000 hours on Wed 1, total 2,000), and 'Windows XP Deployment' (2,000 hours on Tue 30, 1,000 on Thu 2, total 3,000). The interface also includes a filter by Project and Task, and a 'Time [hours]' input field.

Project	Task	Mon 29	Tue 30	Wed 1	Thu 2	Fri 3	Sat 4	Sun 5	Total	✓	!	✖	Type	→
Global Infrastructure Deployment	Create software maintenance team	2,000			2,000				4,000	<input type="checkbox"/>	<input type="checkbox"/>		reg	<input checked="" type="checkbox"/>
Windows XP Deployment	Report on testing progress			4,000		2,000			6,000	<input type="checkbox"/>	<input type="checkbox"/>		reg	<input checked="" type="checkbox"/>
Windows XP Deployment	Schedule test events	2,000							2,000	<input type="checkbox"/>	<input type="checkbox"/>		reg	<input checked="" type="checkbox"/>
Windows XP Deployment	Document features and components to test			2,000					2,000	<input checked="" type="checkbox"/>	<input type="checkbox"/>		reg	<input checked="" type="checkbox"/>
Windows XP Deployment	Prepare a test plan and checklists based on		2,000		1,000				3,000	<input type="checkbox"/>	<input type="checkbox"/>	3	reg	<input checked="" type="checkbox"/>

Highlights

- Weekly time and expense reports
- Compliance reporting
- Approval workflow
- Detailed reporting views
- Task re-estimation process
- All standard reporting tools supported
- Export to Microsoft Excel with field to cell mapping

Detailed Project Tracking

Ensure on-time project delivery.
Staying on track means keeping track.

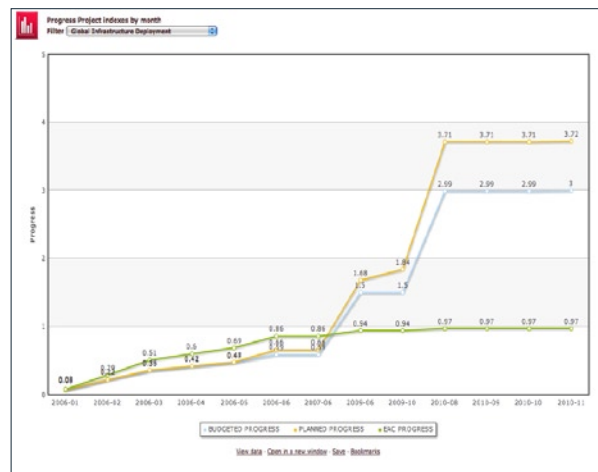

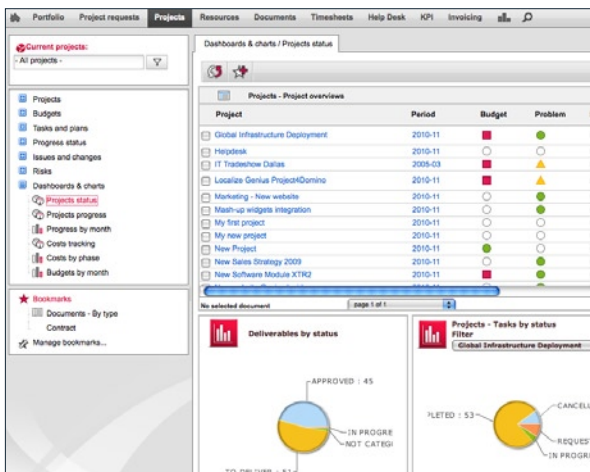

Project monitoring. To be pro-active and for optimal project steering, Genius Project provides you with all the essential information to monitor your projects: resources used, estimated and actual costs, deliverables, task progression, and a lot more.

You know what has been done, how long it took, the costs, what remains to be done, the problems encountered and the results.

Visual indicators. Easily interpreted progress reports and delay management are provided. You always know who and what. Resource allocation and expenditures, as well as the control of time spent, puts an end to any possible project slippage thanks to an effective and accurate detail tracking and escalation system.

Genius Project Dashboards are displays that summarize details in a concise management summary. These displays show interpretive color-coded indicators and a collection of project statistics. The six standard project indicators shown are Time, Cost, Effort, Progress, Issue and Risk. For each project you set targets for the Completion Time, Budget and Completion Effort.

Personal project tracking. Genius Project provides personal dashboard to see all your planned, on-going and requested activities, the document and reports you have to work with, a clear view of process and workflow you are involved in.

Highlights

- Accurate tasks and to do follow-ups
- Visual indicators
- Delays, alerts and reminders
- Actual vs. Planned
- Deliverable tracking
- Approval tracking
- Personal dashboard
- Personal calendar

Document Management

Improve resource output by eliminating duplication and paper waste

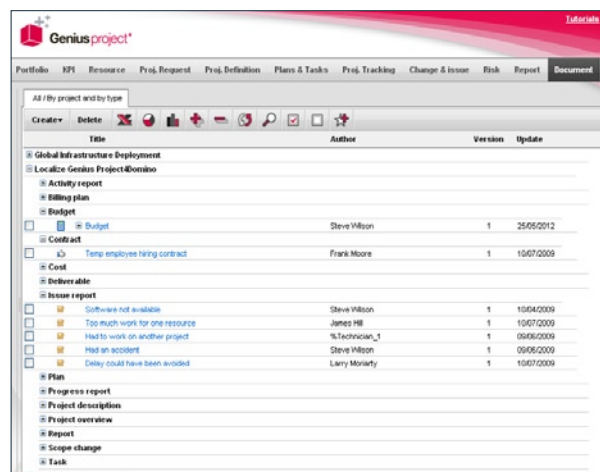

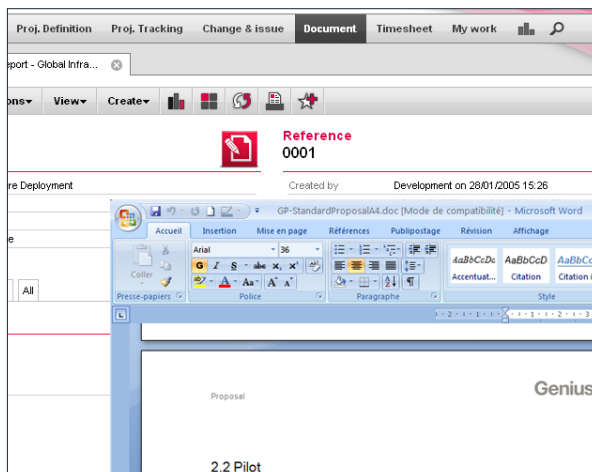

Genius Project manages all documents related to projects. It provides document templates and helps in the structuring of information. These can be easily extended with a series of pre-defined documents, according to your requirements.

Centralized document management. Genius Project and its internal templates allow you to integrate all your documents into the reference system, whatever their format (Excel, Word, Wordpro, Photoshop, Paint Shop Pro, Adobe Acrobat, AutoCAD, etc.). You can then design your own document formats.

A real project documentation tool. Genius Project is more than just a file store in the project database, it also allows you to attach files and comments to any piece of information, such as tasks, deliverables, project descriptions, and many others.

Microsoft Office integration. Genius Project's Microsoft & Open office integration allows you to produce richly formatted Microsoft Word, Microsoft Excel or Open office documents with your project data. Users can create new Microsoft Word documents, Microsoft Excel worksheets or Open office based upon user-defined templates. Depending on the template setup, Genius Project will populate the document fields with corresponding project data – a feature similar in concept to a mail-merge.

Classification. Genius Project allows you to classify all your documents with up to 20 different criteria and to link related documents.

Highlights

- Streamline the collection of new work and project requests.
- Provide a thorough and documented review process.
- Establish common criteria for incoming requests and simplify choice.
- Collect, track and review, all requests through a central repository.
- Define common metrics, key performance indicators (KPIs) and risk factors for evaluating performance.

Process Automation & Collaboration

Stay connected and share information for effective collaboration

Process and workflow support. Define the workflow yourself in order to automate and support your business processes. Organizations can incorporate the desired flow cycles, gates, typical phase reviews and approvals that meet their organizational requirements.

E-mail notification. This feature is quite popular among Genius Project users as it permits excellent communication within a team. Each user may decide to receive an e-mail when he or she is assigned to a new task or when one of their tasks (or any other kind of documents) are modified. This frees the project manager's time for more important tasks. E-mail notification, is automatic!

Collaboration. Genius Project enables project managers to assimilate users outside of your organization, without jeopardizing your corporate structure or your security policies. All the project team members stay connected and share information for effective collaboration, performance and response. Teams are constantly more knowledgeable, which leads to better decisions and reduced costs.

- Project forums

Risk and Change Management

Change is a good thing when it's done right...
but there are always issues

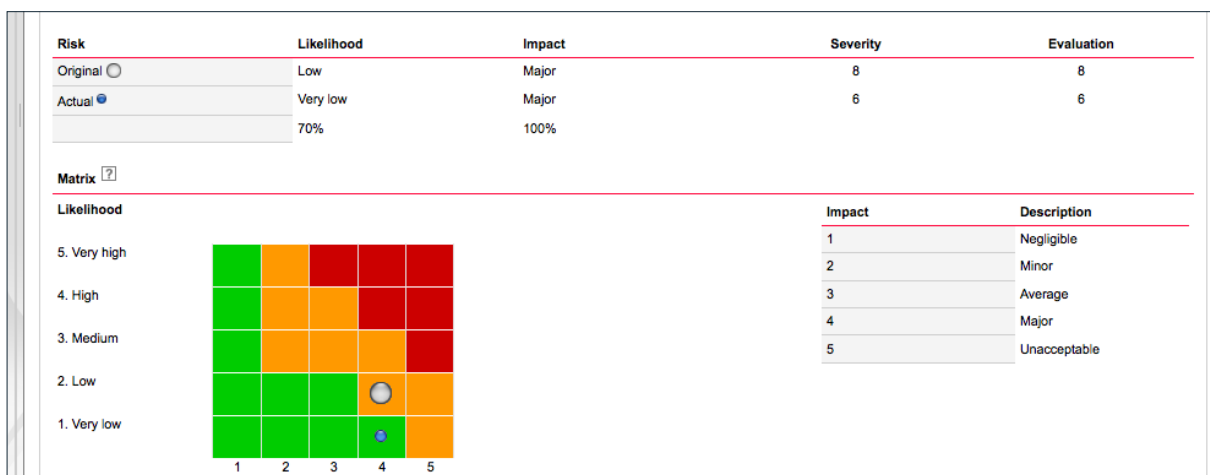

Risk management is crucial to the success of any project. Genius Project is project management software that allows team members to contribute to the risk registration for a project, identify severity of the risk, analyze its impact, and discuss ways to mitigate the risk.

Change management. Genius Project makes it possible for the team to clearly document changes, evaluate the impact, identify the affected items, and translate the new business needs to specific tasks that can be directly assigned to team members. An integrated routing process helps in both the evaluation as well as approval of the change request.

Issue tracking. Genius Project allows all stakeholders to report issues and keep track of pending issues in the project. The integrated

notification reporting and tracking of issues, changes, risk helps in project level quality assurance.

Help Desk. For many organizations, Help Desk is seen as a support function that IT needs to address quickly with minimal impact on their projects. In reality, poor Help Desk management can lead to an inferior customer experience and lack of performance from your support staff. Delivering an integrated solution, Genius Project allows you to have single point of access to your project statuses, portfolios health and daily logged events. With Genius Project's work flow engine you can easily capture and manage Help Desk events improving the quality and speed of your service.

Highlights

- Risk impact and probability analysis
- Mitigation plan
- Issue Management
- Change Management
- Analysis of forecast and actual impact
- Help Desk

Dashboards and Reporting

Enhance project analysis with powerful project analytics and reporting software

Genius Project provides a powerful platform for reporting, analysis and information delivery. It combines report creation and analysis tools with a content management and delivery system. Genius Project analytics capabilities gives portfolio users and the project manager the big picture while allowing them to drill-down to the smallest detail.

Project dashboards and Genius charts.

Genius Project offers 100% configurable dashboards which can contain only the views or graphics you want, or a combination of both. Once defined, these dashboards can be made available to all users simply by adding them to the navigation. Genius project comes with a collection of predefined dashboards, but you can create and store your own. Genius Chart allows users to easily create or customize charts, including drill down capabilities.

Analytics and ad-hoc reporting capabilities

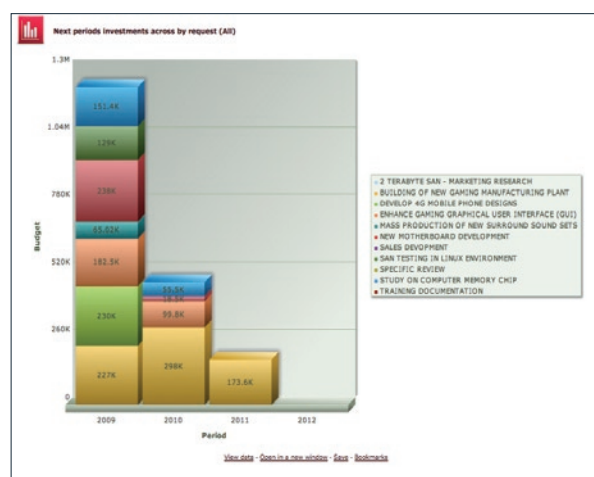

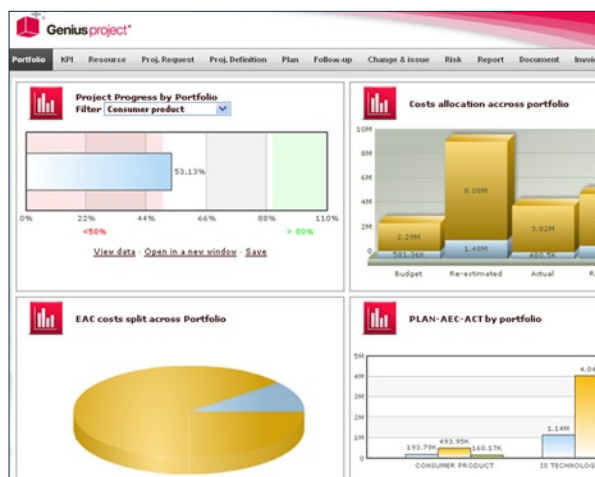

let users create ad-hoc reports with the ability to query, filter, group, compute and format data from Genius Project views on-the-fly.

Genius Project's reporting engine

is an effective communication tool for sharing information on the advancement of a project with all people concerned – internal and external. Our server based report engine can even automatically generate reports in Adobe PDF format.

Reporting with Microsoft Excel.

Transform any Genius Project view into a Microsoft Excel report or chart. Create your reports layouts once, store them in the template repository, and use them many times.

Highlights

- Built-in Genius Chart report generator
- Set of pre defined dashboards
- Configurable dashboards
- Batch generation
- Secured access to report
- PDF format reports
- Automatic generation and distribution of report
- Microsoft Excel report

Solutions for Business Processes

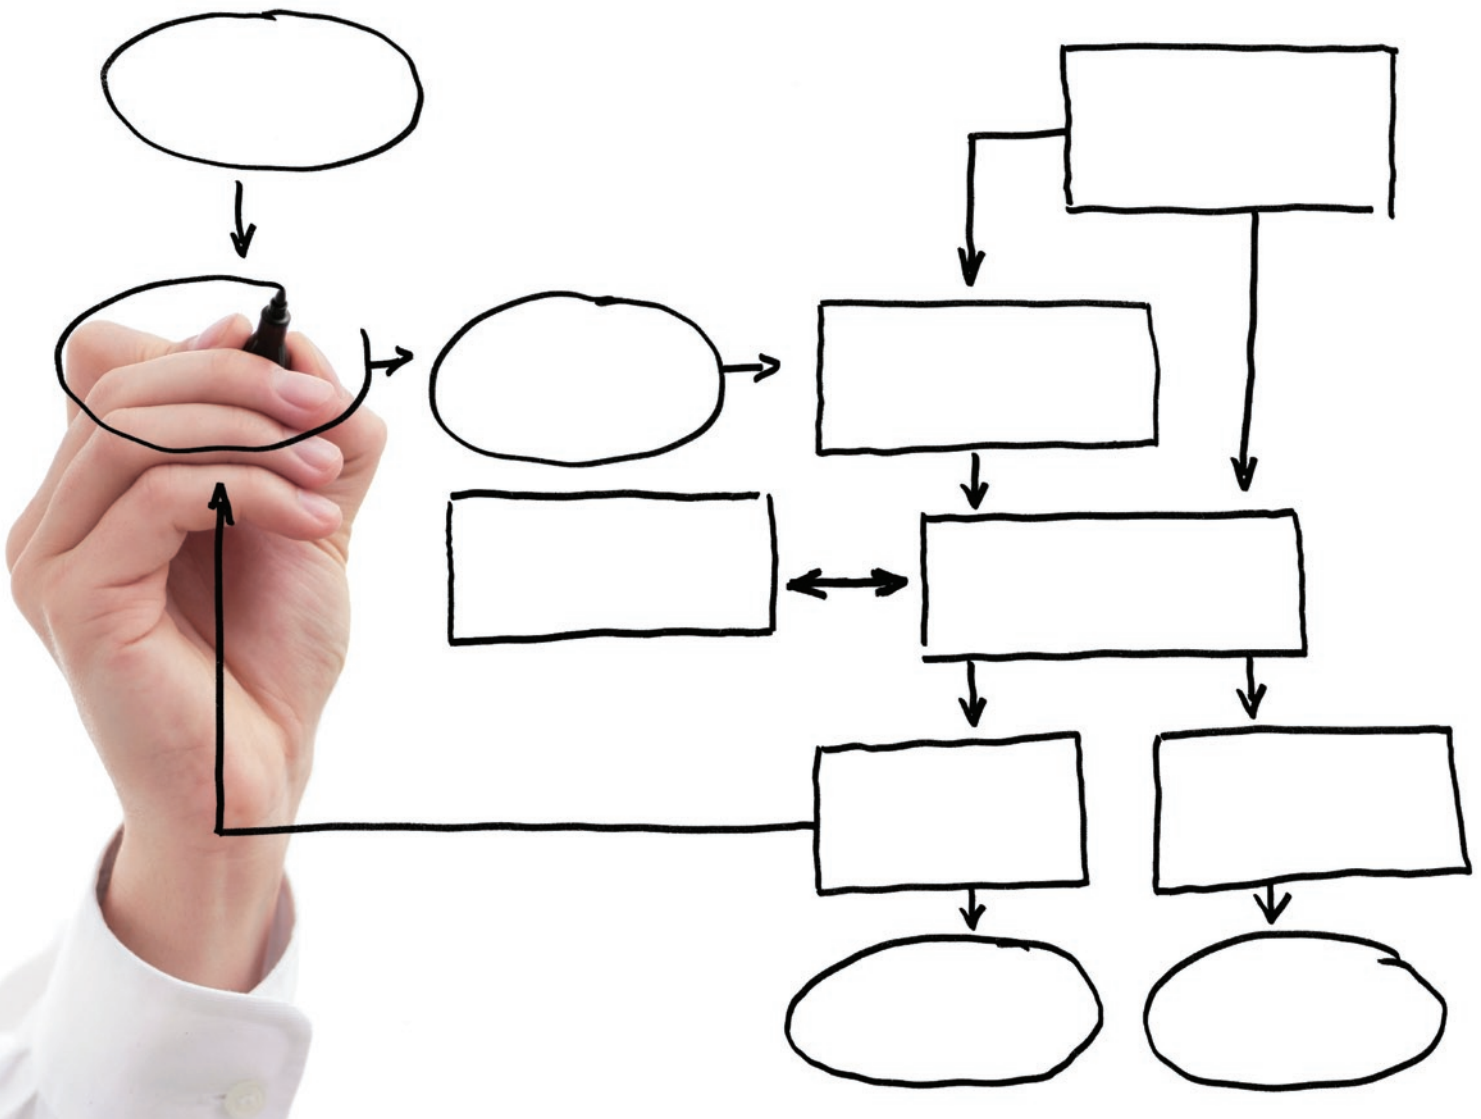

We adapt to you, not the other way around

Processes such as reviews, approvals, and others can be tailored using Genius Project's automated workflows and process design. Project templates can be used by PMO's to ensure compliance with company-wide standards for common project scenarios. This ensures that all projects of one type will have the same structure, and will result in making it easier for everyone to follow and collaborate.

The need to standardize processes across entire organizations exists within companies of all sizes. With as many processes as there are companies, no single model can satisfy them all. Thanks to the flexibility of Genius Project software and its ability to adapt, your company can continue following the processes that work best for you.

Our strength lies in the logic of project management and our expertise lies in the ease of mapping your processes into our project management software.

Don't change a thing. Genius Project likes you just the way you are.

What Makes Us Different?

Complete, customizable and reliable

When your company chooses Genius Inside, you are not simply choosing our experience and expertise, you are choosing a solution that conforms to and supports your processes and that will support you throughout your growth and development.

Top 5 reasons why you should choose Genius Project as your project and portfolio management solution:

- We have acquired extensive expertise in project management over the past 10 years through working with our many customers across a large variety of different industries
- Our software is built by project managers for project managers
- We listened to your needs and have adapted our software to fit them
- We are the best price-for-value solution on the market
- Genius Project will evolve with your company, and help you can start with the very basics of project management and grow into its more complex aspects.

Top 5 features that makes us different

- Genius Planner: the best online Gantt Chart available and the only one that can compete with MS project.
- Workflow: Ability to design a unique workflow for all types of information to ensure consistency and compliance with implemented processes
- Flexibility: Genius project is designed to support all kinds of set up requirements such as different document names and types, workload units (hours or days), currencies, groups, etc.
- Easily customizable: Our team of skilled developers are available to help design custom features and functions to accommodate the specific needs of your organization
- Document management: Stop wasting time searching for documents, Genius Project provides a central repository for all of your project related documents that is available to your entire project team. It supports the attachment of all file types and allows you to edit any attachment directly in Genius Project to ensure that everyone has access to the same and most up to date versions.

Integration Capabilities

Genius Project knows how to get along with others

Integration between software applications is a powerful and effective way to streamline the collection of data across entire organizations and eliminate redundant and duplicate data entry into multiple different applications.

Our ease of integration with a variety of different software applications means that the setup and implementation processes will be shorter, resulting in quicker user access. The final result is lower acquisition costs and better ROI.

Genius Project can integrate seamlessly with a large list of existing enterprise applications, such as SAP, People Soft, Oracle and many others. Genius Project also provides integration with enterprise portals, CRM systems, help desk and others.

Genius Project supports MS project integration to let you use your existing planning tool while taking advantage of our collaborative platform.

About Genius Inside

Genius Inside was founded in 1997 to address a need for project management software for the IBM Lotus Notes market. Genius Inside has also been offering it's on demand solution since April 2008 and hosted on-premise since 2010. With offices in Europe and North America, supported by a network of resellers worldwide, Genius Inside now has over 55,000 end users and over 550 customers worldwide. Genius Inside has been a recognized IBM Partner since its founding and has received numerous certifications.

Genius Inside not only provides powerful project management software but also an expertise in project management best practices.

Dedicated to delivering the best on-demand, hosted-on premise and Lotus Notes project management software Genius Inside's mission is to make project managers' lives easier by improving project selection, planning, staffing, execution and tracking with our easy-to-use and powerful project management solutions.

Whatever your platform, we have a solution

Genius project[®] On-Demand

Genius Project is the perfect solution for any organization that requires a solution on demand with no large upfront investments costs

- SaaS (on-demand)
- Yearly subscription fee that includes online support, updates and upgrades
- Accessible via any web-browser
- Genius Inside sets up and maintains the system

Genius project[®] Enterprise

Genius Project for Enterprise is the most secure solution for companies that would like to have their data on their own server with access via Internet

- Hosted on-premise (on your own server)
- Accessible via any web-browser
- Upfront payment plus yearly maintenance that includes online support, updates and upgrades
- Genius Inside sets up the system but you maintain it

Genius project[®] for Domino

Genius Project for Domino is the ideal solution for any organization that is Lotus Notes based.

- In-house on a Lotus Domino Server
- Upfront payment plus yearly maintenance that includes online support, updates and upgrades
- Accessible on desktop with Lotus Notes database and via any web-browser (with the web server)
- You set up the system and install the upgrades (updates)
